DURATION	CORRECTIONS	BLOCKING	NEW FEATURES
1 week	35	8 items	None · moved to Sprint 4

1 What this sprint is for

Testing the platform produced a list of 35 problems. This sprint fixes them and adds nothing. **Every new request raised during testing moved to Sprint 4**, so this week is entirely about making what exists work correctly.

Eight of the 35 **break the commercial cycle** — they stop a sale from completing. They are done first, in a defined order, before anything cosmetic is touched.

2 The eight that break the cycle

No email is being delivered, and the cause is known

Every notification in the test came back as **devolvido**. The provider gives the exact reason:

```
validation_error: Invalid 'from' field. The email address needs to follow the 'email@example.com' or 'Name <email@example.com>' format
```

The sender field is being sent as **two addresses separated by a comma**. No provider accepts that — a message has one sender. If both mailboxes need to receive replies, they belong in the recipient or reply-to fields.

WhatsApp shows a separate cause: **no keys configured**. That is a credential, not code.

Both are small fixes. They come first because until they are done, nothing else in the flow reaches the customer.

ID	PROBLEM	CONSEQUENCE TODAY	COMPLEXITY
C-03a	Sender field malformed, no email is delivered	Customer never told anything	LOW
C-03b	WhatsApp credentials not configured	Only one channel, and it is broken	LOW
C-02	Payment proof cannot be opened	Payment cannot be validated, ticket cannot be issued	LOW
C-24	Changed dates block the flow	A better fare cannot be offered	MEDIUM
C-33	Payment tab does not reflect the method chosen	Agent cannot send payment details	MEDIUM
C-01	A case can be quoted without being claimed	Two agents on the same case	LOW
C-04	A case cannot be closed after issuance	Finished work stays in the queue	LOW
C-05	Link state reported wrongly	Team acts on false information	LOW

The most expensive item on the list

C-24. If the agent finds a better fare on the following day, they cannot offer it. The warning fields get filled in and the system still refuses to move forward. There is no dedicated place to confirm the change was deliberate.

This means **a cheaper or better option is lost because of a validation rule**. The fix is a justification block with an explicit Confirm date change action: the case proceeds, the reason is logged, the customer is notified, and the original request stays visible in the history.

3 Data corrections

ID	CORRECTION	WHY IT MATTERS	COMPLEXITY
C-08	Simplified price: per passenger plus WeeFly service, no airport tax line	Faster quotes	MEDIUM
C-09	Dates pre-filled from the request	Less typing	LOW
C-28	Pre-filled fields marked in yellow with a warning icon	Agent sees what came from the customer	LOW
C-29	Baggage separated per flight, not one value for the whole trip	Allowances differ by airline	MEDIUM
C-07	Country and airport autocomplete, showing RAK — Marraquexe	Faster, no typos	LOW
C-06	Dates of birth in the future are rejected	Wrong passenger type breaks the fare	LOW
C-10	More airlines in the list, with logos	Serves every route sold	LOW
C-12	Consolidator cost and calculated margin, internal only	Margin visible before quoting	LOW
C-26	Airline and logo carried through to the digital ticket and the PDF	No double entry	LOW
C-27	Flight number removed from the proposal, kept at issuance	Shorter proposal	LOW

How the price works after this sprint

Total = (price per passenger × number of passengers) + WeeFly service

Price per passenger is the final airline price with taxes already included — there is no separate airport tax line anywhere.

WeeFly service is charged once per booking, pre-filled at 20 and editable. The customer sees two lines and the total: Price 420 € + WeeFly service 30 € = 450 €, so nobody has to ask why the total is 450 and not 420.

4 Interface and usability

ID	CORRECTION	WHY IT MATTERS	COMPLEXITY
C-14	Notifications working, with every one listed in the bell	Nothing goes unseen	MEDIUM
C-15	Step changes and field updates listed in Communications	Full case history	MEDIUM
C-31	Notes exchanged with the customer shown in Communications	The company owns the conversation	MEDIUM
C-32	Alert whenever the customer advances a step	Team reacts immediately	LOW
C-25	Pre-written message for WhatsApp and email	Agent stops writing by hand	LOW
C-16	Auto-save no longer interrupts typing	Nothing lost mid-sentence	MEDIUM
C-17	Missing fields listed at the top and highlighted in place	Errors found in seconds	LOW
C-13	Top menus with no action removed	No dead buttons	LOW
C-30	Revision R2 removed for now	Agent no longer gets trapped	LOW
C-20	Only the WeeFly Concierge profile	Matches the service being sold	LOW
C-21	Seller list read from real users — for now only Dominik	Ready for the team to grow	LOW
C-18	Rename Compose proposal to Create proposal	Plainer language	LOW
C-19	Overlapping numbers in the time field	Legibility	LOW
C-22	Language consistency across every screen	Professional impression	LOW
C-23	Unexplained counter given an origin and made clickable	No unexplained numbers	LOW

The message the agent sends

Today the WhatsApp button returns a bare address, or a single line with no content. The agent writes the rest by hand, every time. After C - 25 the message arrives complete and ready to paste:

Caro Ivandro,

As nossas propostas para a sua viagem Praia → Lisboa já estão disponíveis.

Pode consultá-las e escolher a que preferir neste link:
weefly.africa/c/8f3a2c91d47b6e05

Depois de escolher, preencha os dados dos passaportes no mesmo link e enviamos-lhe as instruções de pagamento.

WeeFly Concierge

Templates per phase — proposal sent, awaiting payment, ticket issued — with the name, route, reference and link filled automatically, and always editable before sending.

Why revision R2 is being removed

Opening a revision unlocks the proposal for editing and hides the prices from the customer while it stays open. Clicking it leaves the agent in an intermediate state with no obvious way back. **The concept is correct; the implementation traps the user.** It is removed now and returns in Sprint 5 with a cancel action and a clear explanation of the state.

5 How payment works after this sprint

The customer no longer pays inside the link. They **choose a method**, that choice reaches the backoffice, and the agent supplies the link or the details. **Payment happens outside the platform; validation happens inside it.**

METHOD CHOSEN	WHAT THE AGENT GETS IN THE PAYMENT TAB
Stripe	Field to paste the Stripe payment link
Vinti4 / 24	Field for the SISP reference or link
Revolut	Field for the Revolut link
Instapay	Field for the reference
PayPal	Field for the PayPal link

Every method also carries the amount to charge, the deadline, and a send-to-customer action using the pre-written message. Below that sits the proof validation area. **Bank transfer is removed from this phase.**

6 Order of work

#	GROUP	REASON
1	Email sender and WhatsApp credentials	Until these work, nothing reaches the customer
2	Payment proof, link state, claiming, closing a case	Unblock validation, issuance and completion
3	Changed dates and the payment method tab	The two that stop a sale completing
4	Price, dates, yellow markers, autocomplete, errors, baggage	The proposal must be correct before it goes out
5	Remaining data corrections	Validation and completeness
6	Notifications and case history	Visibility of what is happening
7	Interface corrections	Quick wins, safe to leave for last

7 What moved to Sprint 4

These were raised during testing but are **new features, not corrections**. Keeping them out is what makes a one-week correction sprint possible.

Reservation code search on the universal link	Roles, permissions and user management
Seeing which team members are online	Internal chat between colleagues
Final states: complete, cancelled, expired, archived	Link preview on WhatsApp with the logo
Back-to-dashboard button	English and Portuguese toggle
Copy-paste to fill the ticket fields	User profile screen
Full menu structure, live bar and dashboard	Revision R2, returning in Sprint 5

8 Still to decide

#	QUESTION	AFFECTS
Q3	Who takes a request with no seller attached, and does the person who claims it earn the commission?	How the team works
Q4	How long are conversations, documents and the activity log kept?	Sprint 4
Q6	How many bookings a year define Diamond and Platinum?	Later sprint
Q7	Should amounts follow the customer's language or the currency?	Number formatting
C - 23	Which screen shows the unexplained counter	One correction in this sprint

What changes at the end of this week

Emails and WhatsApp messages actually arrive, and every send is recorded with proof of delivery. A payment proof can be opened and validated. A better fare on a different date can be offered instead of being blocked. The agent sends a complete, ready-written message instead of a bare link. A case can be claimed, worked and closed. And the proposal goes out with the right price, the right dates, the right baggage per flight and the airline logo on the ticket.

Nothing new was added. What exists starts working.
