

WeeFly · MVP 2 · Status on 30 September

To	Dominik · Ivandro
From	Fábio
Date	30 September 2026
Basis	WeeFly_MVP2_Para_Developer.md (30 September) · 35 items in 5 blocks
Live	concierge.weefly.africa · commit 06c4b44 · migration 0026 applied

Where we are

20% of MVP 2 done and live
7 of 35 items · 24% counting in-progress items as half

Done and live · 7 (20%) In progress · 3 (9%) To do · 25 (71%)

The first delivery for testing is live: steps 0 to 3 of the *Sequence*. It gives the WeeFly team Admin access and unlocks the Alô accounts.

In terms of effort, the real figure is lower than 20%. The three heaviest pieces have not started yet: the ministry budget (PAR-03), the ministry app (MIN-01) and the branding across every screen and email (TEN-02).

By block

Domains · MIG-02		1/1
A · Partner separation		3/6
B · WeeFly Admin		3/9
Back office PT/EN · I18N-01		0/1
C · Alô back office		0/8
D · Ministry app		0/7
E · Passenger records		0/3

Done In progress To do

BLOCK	DONE	IN PROGRESS	TO DO	TOTAL
Domains · MIG-02	1	0	0	1
A · Partner separation	3	0	3	6
B · WeeFly Admin	3	2	4	9
Back office PT/EN · I18N-01	0	0	1	1
C · Alô back office	0	1	7	8
D · Ministry app	0	0	7	7
E · Passenger records	0	0	3	3
Total	7	3	25	35

Done and live

ID	WHAT IT DOES
MIG-02	Every link comes from the configured address, never from the address the back office was opened on. The server only answers on <code>concierge.weefly.africa</code> . The NGINX file that switches off <code>weefly.duckdns.org</code> is ready.
TEN-01	Partner → organisation → case. Every case has a partner; the organisation is optional.
TEN-03	The back office reads through the signed-in user's session, and the database decides what each account sees. A case from another partner opened by its direct address returns not found . The queue, search, notification bell, clients and seller picker all respect the same boundary.
TEN-06	Every account belongs to a partner, taken from the session. Permissions come from the profile stored in the data. Admin appears for any account with the <i>WeeFly Admin</i> profile, not only Dominik's. Login opens the Concierge.
ADM-01	<i>Admin › Partners</i> : create a partner (which creates its first administrator and sends the invitation), configure its details and branding, suspend without deleting. Suspension blocks login and freezes the partner's links.
ADM-02	<i>Admin › Users and permissions</i> , and <i>Agent › Team</i> for the partner admin. The five fixed profiles. Create, edit, suspend and reactivate; nothing is deleted. Suspending ends open sessions. Every change is logged with author, date, before and after. A partner admin cannot grant the WeeFly Admin profile — refused by the database, not only by the screen.
ADM-09	Admilson (<code>admilsonborges@bonako.com</code>) has the WeeFly Admin profile.

In progress

ID	WHAT IS LEFT
ADM-05	Future modules already show as locked with <i>Coming soon</i> (from <code>PR0-03</code> / <code>PR0-04</code>). To be confirmed in testing.
ADM-07	The commission field already exists on the case, empty. Nothing is calculated until decisions C1, D1, D7 and D8.
PAR-01	Login already opens the Concierge. To be confirmed with a real Alô account.

Proven before deployment

- Migration `0026` ran on a test Postgres, twice in a row, together with the 25 before it.
- The isolation tests run the way Supabase runs: one account per partner, every table, reads and writes. They include B4 (a partner admin cannot grant WeeFly Admin), B5 (suspension cuts access on the next request) and B6 (the change log).
- An independent code review looking for leaks between partners found three issues, fixed before deployment.

To close the first delivery

#	WHAT	WHO
1	Run the Block A tests (A1–A9) and Block B tests (B1–B6). <i>"If one fails, no real Alô account is opened."</i> The steps are in <code>docs/mvp2-entrega-1.md</code> .	Admilson · Dominik
2	Send Admilson his invitation: <i>Admin › Users and permissions › Resend invitation</i> .	Dominik or Fábio
3	Install <code>deploy/nginx/weefly-duckdns-off.conf</code> and switch off the DuckDNS updater. The old address must stop answering.	Fábio
4	Close port 22 on the server. It is open to the whole internet; access already goes through Session Manager.	Sarin

A10 (`alo.weefly.africa/m/nao-existe`) and A6 (export) cannot be tested yet: the first depends on DNS (`TEN-04`), the second on `ADM-03`.

Decisions needed

In order of urgency: the first ones hold up the work of the coming weeks.

#	QUESTION	WHO DECIDES	BLOCKS	NEEDED BY
S1	Approve the scope change: ADM-02 and ADM-08 are part of MVP 2. ADM-02 is already done.	Ivandro · Dominik	MVP 2 dates	Now
O3	Does ministry management sit inside Client or in its own Ministries menu?	Ivandro	PAR-02 (step 5)	Before step 5
O4	Does the secretary sign in with the link only , or with link and password ?	Ivandro	MIN-01 (step 6)	Before step 6
O1	Who at Alô and at WeeFly receives the balance alerts?	Alô · Dominik	PAR-05 · ADM-06	Before step 5
O2	Does the ministry see its own balance, or only Alô?	Dominik · Alô	PAR-03	Before step 5
D9	When a traveller does not fly, what happens to the amount already deducted from the budget? Until then: manual credit with a reason.	Contract with Alô	PAR-03	Before launch
C1	Are commissions calculated in the system (v5.2) or outside it (decision of 26 September)?	Ivandro · Dominik	ADM-07 · PAR-08	Before step 7
D1	Is the per-issuance percentage on cost or on the amount charged to the ministry?	Dominik (with Alô)	ADM-07	Before step 8
D7	Is the per-account fee charged once or every month?	Dominik	ADM-07	Before step 8
D8	Is the commission different for an official reseller and a white label?	Dominik	ADM-07	Before step 8
L1	Legal basis for storing passports and contact details of government staff.	Legal	DAT-03	Before launch
L2	Retention period for that data.	Legal	DAT-03	Before launch
L3	Must the data be hosted in Cape Verde? The server is in Ireland (AWS).	Legal	Infrastructure	As soon as possible — if the answer is yes, it changes where everything runs
L-03	Dutch: the text for "no baggage" is missing.	Dominik	NL dictionary	When possible

What needs to be requested

From Alô — to set up the partner (ADM-01, TEN-02, MIN-04)

ITEM	STATUS
Trading name	✓ Alô Cabo Verde Tour
PNG logo	✓ Received
Primary and accent colours	✓ From the logo
Vector logo (SVG or PDF)	✗ The PNG has jagged edges
Compact logo (the globe only)	✗ For mobile, the app icon and the favicon
Dark colour — confirm #0078E8	✗
Legal name, tax number (NIF), address	✗
Contact person, email, phone	✗
Email sender name and address (e.g. reservas@...)	✗
Reply-to address	✗
Footer text	✗
Support WhatsApp number	✗
Does the link show the Alô screen or the WeeFly screen?	✗ Assumed Alô
Contract start date	✗
Email of Alô's first administrator	✗ The person who receives the invitation when the partner is created

For testing — a test ministry

Name, address identifier (e.g. teste), coat of arms, name and contact details of the test secretary, opening balance and alert threshold.

From Sarin — infrastructure

REQUEST	WHY
DNS record *.weefly.africa pointing to the server	TEN-04 · alo.weefly.africa
Wildcard certificate for *.weefly.africa	TEN-04 · one certificate for every partner
Close port 22	Security · access already goes through Session Manager

Resend (Fábio)

Verify Alô's sending domain once they say which one it is. Without it, Alô's emails cannot go out under its own sender (**TEN-02**).

Next steps

STEP	ITEMS	DEPENDS ON
4	TEN-02 branding · TEN-04 addresses · TEN-05 Powered by WeeFly · I18N-01 back office PT/EN	DNS and certificate (Sarin) · Alô's details
5	PAR-01 to PAR-05 · ADM-08 B2G area · ADM-06	O3 · O1 · O2
6	MIN-01 to MIN-07 · the ministry app	O4 · test ministry
7	PAR-06 to PAR-08 · quoting, external payment, finance	C1
8	ADM-03 , ADM-04 , ADM-07 · figures and revenue	D1 · D7 · D8
9	DAT-01 to DAT-03 · passenger records	L1 · L2 · L3

What moves now, without waiting

Everything that belongs to the platform and does not depend on an external decision or piece of data starts now, in the order of the *Sequence*. The decisions slot in later without redoing the work.

ITEM	HOW IT MOVES WITHOUT THE DECISION
TEN-02 · TEN-05 · I18N-01	In full. Branding reads whatever is filled in on the partner; Alô's missing details go in through the screen, with no code.
TEN-04	Subdomain routing is built and tested; it switches on the day the DNS and certificate exist.
PAR-02	Built in its own menu. If O3 says <i>inside Client</i> , only the menu position changes.
PAR-03 · PAR-04	In full: balance, movements, deduction at issuance, blocking. O2 is a switch (the secretary sees the balance or not), and D9 stays as a manual credit with a reason, as the document asks.
PAR-05 · ADM-06	The alert engine and the recipients screen. O1 is just filling in who receives them.
ADM-08 · ADM-04 · ADM-03	In full, read-only.
MIN-01 to MIN-07	The whole app. The secretary's sign-in (O4) is left to connect: nothing else depends on it.
PAR-06 · PAR-07 · PAR-08	In full, without the commission column (C1).
DAT-01 · DAT-02	In full.

On hold until there is an answer: the commission calculation (**ADM-07**), and the commission in (**PAR-08**) and data retention (**DAT-03**). And no link is sent to a real ministry before L1, L2 and L3.
